1. Overview

Professional standard: Coach Developer

This professional standard outlines the role and scope of a Coach Developer and the essential knowledge and skills that are needed to meet the requirements of practitioner membership with CIMSPA (the sector minimum deployment standard).

This full version of this standard is available to CIMSPA awarding organisation, training provider, higher education and further education partners. It provides guidance for the development of educational products that will be endorsed by CIMSPA.

The Coach Developer sits in the sport and physical activity sector as part of the professional and community sport industries.

Endorsed qualification logo

CIMSPA endorsed education products that meet the requirements of this CIMSPA professional standard will display this official CIMSPA endorsement logo.

2. Scope of the Coach Developer

Coach developers are expert support practitioners who plan for, implement, and sustain strategies and interventions in support of skilled performance in sport coaching.

Coach development practice takes a coach's individual, work-related tasks and associated knowledge, skills and experiences as its starting point, preparing for and supporting learning and development with regard to both current and anticipated, future needs. It is an evolving process, reviewed as the relationship develops, and built on trust, mutual respect and professional curiosity.

The coach developer's work is educational, developmental, caring and support-oriented: interventions may include the development of technical skills, enhancing interpersonal relationships, evolving effective strategies to manage specific challenges and constraints, or a combination of these. Whatever the specific nature of a coach developer's work might be, it will always be characterised by prioritising the health and well-being of the coach. It will also be collaborative, contextually situated, and concerned with helping coaches to develop active, critical knowledge and skills.

Coach developers frequently work with other stakeholders that share a coach's environment in order to support sustainable, long-term behavioural changes.

Core Topics

Planning and initiating coach learning and development

Coach Developers continually plan and prepare for interaction(s) by gathering relevant information on the individual they are working with, the context in which they operate, other stakeholders in that environment, and existing relationships. This information about biographies, prior learning, experiences and motivations helps shape the nature of support and informs the coach developer's pedagogical and behavioural approaches. Coach developers' practice is flexible and adaptable, collaborative in style and forms a caring relationship with the coach. The planning process is iterative as the coach developer progresses through implementation, sustaining, and review of coach learning and development.

Supporting and sustaining coach learning and development

Supporting and sustaining planned, support-oriented interactions and interventions requires the coach developer to work flexibly and dynamically as a coach's needs, context(s), and environment(s) change. Working with coaches and others, coach developers draw upon novel combinations of interpersonal skills, pedagogical knowledge — and an understanding of the experience of coaching in specific environments¹ — to create rich learning environments that can extend beyond their period and scope of involvement. Sustainable support relationships prioritise the health and wellbeing of people, and are further characterised by ongoing learning and development, professional and ethical practices, growth, and autonomy.

Evaluating and reviewing coach learning and development

The evaluation and review of planned support forms a critical component in the ongoing process of planning, implementing, and sustaining coach learning and development. Coach developers use knowledge and skills to make judgements about their interactions with coaches and others. In this way, evaluation and review serves as assessment *of* and *for* learning that generates meaningful feedback. In turn, this enables an ongoing iteration of goals and objectives, interactions and interventions, strategies and behaviours.

¹ Informed by the relevant environmental standard.

The effective practitioner

Becoming a skilled and effective coach development practitioner involves the development and maintenance of occupational skills that form both a *foundation* and a *scaffold* for coach developers' contextual knowledge and skills. The effective coach development practitioner is engaged in an ongoing evaluation of their practice, underpinned by both their own critically reflective skills and by the support offered by a network of others. The scope of effective practice extends beyond the planning, sustaining, and review of direct interaction with coaches: it includes an applied understanding of appropriate professional standards and boundaries, working discreetly, ethically, and within relevant laws and codes of conduct.

2.1 Role of the Coach Developer: A conceptual framework

The framework shows how coach development practice is comprised of three domains of knowledge — *Who*, *What* and *How* — and a number of contextually situated, professional skills.²

Who knowledge consists of ideas, concepts and theories that may be used to think about coaches' wants and needs, motivations and experiences, skills and knowledge. Also sitting within the *Who* domain, it is important to recognise that all knowledge domains are influenced by a coach's particular experiences — personal and professional — which in turn shape and influence a coach's beliefs, values and perspectives. The context(s) in which a coach is working, and the coach developer themselves, has a similarly influential role and affects the understanding and application of *Who*, *How* and *What* knowledge.

How knowledge consists of ideas, concepts and theories that may be used to shape and influence meaningful learning opportunities for coaches.

What knowledge has been further divided into two sub-domains. Both relate to ideas, concepts and theories that may be used to think about the intended curriculum.

The *What* of the sport curriculum includes knowledge of intended athlete/participant curriculum, general and specific models of the sport or activity, general and specific structures and pathways in the sport or activity, and accompanying social, political, and cultural factors. The *What* of coach curriculum includes ideas, concepts and theories that may be used to think about coaching practice, development pathways in the sport/activity, and how multiple learning and development needs may be integrated.

The framework shows how skills combine knowledge domains. For example, gathering information about a coach's working environments requires skills that combine knowledge of *Who* the coach is, and *How* to support learning.

Whatever the context, these skills draw upon combinations of the same knowledge domains: the combination of *Who* and *How* knowledge; the combination of *How* and *What* knowledge, and the combination of *Who* and *What* knowledge.³

There are three contextual situations: The **planning and initiating** of coach learning and development refers to the way in which knowledge is used when preparing for interactions with a coach. These skills are represented by the inner, solid line that runs through the *Who*, *What*, and *How* knowledge domains; the **supporting and sustaining** of coach learning and development refers to the way in which knowledge is used when dynamically maintaining a meaningful and supportive relationship with a coach. These skills are represented by the dashed line that runs through the *Who*, *What*, and *How* knowledge domains; the **evaluation and review** of coach learning and development refers to the way in which knowledge is used in the ongoing assessment of work with a coach, including goals, objectives, environments, and the relationship itself. These skills are represented by the dotted line that runs through the *Who*, *What*, and *How* knowledge domains.

² Adapted from Abraham, Muir and Morgan, 2010; Muir et al., 2011; Muir et al., 2015; Muir 2018.

³ Of course, there is a constant interplay of all knowledge domains at work, but this simplified framework is intended to illustrate the most significant knowledge-skills relationships that a coach developer draws upon.

3. CIMSPA membership eligibility

Graduates of this standard will meet the requirements to be a Coach Developer practitioner member. They will:

UNDERSTAND

- How to plan, initiate, support, sustain, evaluate and review coach learning and development.

HAVE DEMONSTRATED

- The ability to plan, initiate, support, sustain, evaluate and review coach learning and development.

4. Knowledge and skills requirements

Coach Developer

Topic	Knowledge and understanding
Who are you developing	<p>Theories and concepts to understand coaches' needs and wants. The coach developer has applied knowledge of:</p> <ul style="list-style-type: none">• bio-psycho-social theories and concepts of human growth and motivation⁴;• personal development plans and needs analysis strategies;• sport pathway structures; key roles, processes and stakeholders;• theories and concepts regarding the influence of political, social, organisational, and cultural norms on practices, relationships and decision-making.
How are you supporting learning	<p>Using theories and concepts to create meaningful learning and development experiences. The coach developer has applied knowledge of:</p> <ul style="list-style-type: none">• theories and concepts relating to how adults learn and develop knowledge, skills, and practices;• theories, concepts and ideas relating to coach development practice;• behavioural strategies for building effective relationships;• inclusive practices which reflect principles of equality and diversity;• working with individuals and groups;• the potential impacts of change on coaches and others;• theories, concepts and ideas regarding contextually effective communication – listening, questioning, negotiating – to support learning and development;• collecting and using data to stimulate learning through feedback, practice, and reflection, including dialogue transcripts, notation, video and audio materials.

⁴ Bio-psycho-social is used to describe the interaction between biological, psychological, social and environmental factors in human development, growth, and motivation.

Topic	Knowledge and understanding
What are you working with them on	<p data-bbox="659 212 1461 275">Using theories and concepts to understand the athlete and coach curricula. 5. Product development guidance

This section is aimed at organisations developing educational products mapping to this professional standard. The requirements should be taken into account in the development of all educational products seeking CIMSPA endorsement.

The CIMSPA professional development board (PDB) has agreed that any of the following educational products can be developed for the role of Coach Developer.

Educational product	Mapping requirements	Professional standard achieved on attainment?
Regulated vocational qualification	Fully mapped	YES
Apprenticeship programme	Fully mapped	YES
HE programme/modules	Fully mapped	YES

Where evidence of all elements of the professional standard are included then CIMSPA endorsement can be sought.

Awarding organisations and higher education institutions seeking CIMSPA endorsement for a product against this professional standard are asked to consider the following:

- a) They determine and justify the level of the product they have developed, in line with the regulator's guidance. To ensure parity, the level for all educational products that fully map to this professional standard should be the same; the level assigned is determined by leading awarding organisations currently offering qualifications in the sector in which the role resides. This is not a first-to-post exercise but one in which awarding organisations/higher education institutions are invited to submit their levelled units/full qualification for review as part of the CIMSPA endorsement process. Once agreed by CIMSPA, all subsequent fully-mapped educational products must conform to the level set for this professional standard.

Level descriptors set out the generic knowledge and skills associated with the typical holder of a qualification at a given level and it should be ensured that educational products fully mapping to this professional standard are a 'best-fit' for the level assigned.

- b) They determine the total qualification time for the qualification/unit and outline the minimum requirements for practical assessment.

They stipulate practical assessments must be conducted where possible in a real-work environment ideally 'on the job'/at work.

- c) Their quality assurance meets the appropriate regulator's guidance. Including; internal and external quality assurance, staffing requirements and assessment generation and evidence.
- d) Coach developers need to engage with, and support, a range of coaches from a variety of different contexts, backgrounds and environments. Applying knowledge and developing skills across a variety of coaching contexts is critical.

- e) Learning and development experiences should be representative of the tasks and contexts that a coach developer is expected to encounter, combined with appropriate stretch and challenge.
- f) Learning and development experiences should be integrated into a coach developer's existing working environment(s). In turn, these experiences should be informed by, and integrated with, the context of the coach developer's broader learning and development.
- g) Learning and development interactions will provide coach developers with an opportunity to apply ideas, make decisions and judgements, use feedback, explore their wants and needs, and to make sense of their experiences.
- h) The health and wellbeing of coach developers, coaches, and athletes/participants should always be of the highest priority in any programme of learning and development. Similarly, care for the impact on coaches and athletes/participants must form the overall context against which coach development interventions, goals and objectives are considered;
- i) Whilst the conceptual framework shows the knowledge domains and contexts separately, for the purpose of clarity, any programme of learning and development should reflect the connection and interdependency between these knowledges, professional skills and practice.

6. Glossary of Terms

Assessment of and for learning – assessment of learning is concerned with what individuals know and can do. Assessment for learning is intended to inform the learning process, understanding where the individual is and involving them in the learning process.

Behavioural approach / behavioural strategies – how individuals plan for and subsequently behave in specific situations (e.g., building trust and rapport to enable supportive challenge).

Contextually situated – occurring within the context of an individual's work (e.g., their coaching environment with real athletes/performers).

Pedagogy – the design and delivery of teaching and learning activities.

Representative – typical and authentic. In the context of this standard, this refers to activities, interactions, and challenges that replicate real coaching situations in typical coaching environments.

Thinking tool – models, frameworks, theories and contexts used to make sense of situations, challenges or problems from different perspectives (e.g., Self Determination Theory – used as a thinking tool to explore the motivations of individuals).

7. Acknowledgements

CIMSPA would like to thank the following individuals and organisations for contributing to the development of this standard:
